

Themed Media Player

Goals

Conceptualize a theme and design an interface to present different media around that theme. Utilize ActionScript to create interactive Flash interface. Use design and media to express a sentiment. Create a user experience.

Design

Design concept is based on my family experience of the Christmas holiday. Media used in the project centers on this theme. Use themed images as buttons to strengthen the message of the theme.

User experience is reinforced with animations that entice the user to interact with the interface

Relevance for Portfolio

Concept implementation. The skills acquired and displayed can be transferred to display other materials in an interesting and interactive manner. (Learning Object) Media players can be used to introduce and investigate a variety of subjects for example, an interactive museum.

Target Audience

Family and friends

Technology

Flash Actionscript
XML
Adobe Illustrator
Adobe Photoshop
Audacity Sound
XHTML
CSS
